

AXIS 205 Network Camera Indoor Only

Summary The AXIS 205 is the smallest network camera from the biggest name in network video. With its own IP address and built-in web server, it runs directly off your network.

The camera, designed for indoor use, offers superior image quality with three resolution modes up to 640x480 and provides up to 30 frames per second in all modes. It offers support for up to 20 users simultaneously. You can view its live video over a standard browser and can set up multiple cameras affordably, even adding password protection.

It's perfect for monitoring property, people or businesses, and showing facilities or events to others.

Details **Features Include:**
